Inventory Items

Inventory · https://mountainstream.co/docs/inventory-catalogue-settings/

Items in the Master Catalogue can either be products made and sold on the same day OR inventory items that have a certain shelf life, produced in batches and "pulled" from stock as needed.

E.g. **Vegan Brownies –** made in a **batch of 35**, **stored** in the **kitchen fridge** with a **shelf life** of **5 days.**

An item can be set as an **Inventory Item** in the **Item** file – navigate to **Items › Master Catalogue.**

Select the **Edit** pencil for the applicable item.

A. Scroll down to the **Show in Production Planner** section and select the checkbox.
B. The initial default UoM.
C. Conversions can be added.
D. Other information necessary for proper inventory management can also be provided.

[Screenshot of an Inventory Management interface highlighting (a) “Inventory Item” checkbox, (b) size and unit of measure dropdowns, (c) conversion settings, and (d) shelf life, storage location, and max stock capacity fields.]

Images can be added in the edit item page and the description field is also available in **Items › Master Catalogue › Batch Edit**, but images are not.

IMPORTANT: Images should be as small as possible ideally around 50k or less. Higher memory images will affect your customer’s page loading times.

[A screenshot of a product listing form with Inventory Management features, showing pricing fields, nutritional info, and a description field stating: Only available after discussion with Bread & Butter team. Some elements are highlighted with purple boxes.]
