Driver External Identifier

Distribution · https://mountainstream.co/docs/driver-external-identifier/

Set Driver External Identifier to Route

You can assign a driver's external identifier to a route using either of the formats below:

Format 1

In Streamline, navigate to:

Distribution › Settings › Route Manager › Format 2

Format 2

Distribution › Settings › Route Manager › Format 1

(These apply to Base or Daily Templates.)

[Screenshot of a dropdown menu under DISTRIBUTION, showing Settings selected, then Route Manager expanded with two highlighted options: Format 1 and Format 2, alongside other menu items, including Driver External Identifier.]

Steps:

1. For both options, go to the **Edit (pencil) icon** on the route you wish to add an external identifier to.
2. Set the **Optimoroute Driver External Identifier** field.
3. Click **Save**.

Set External Identifier to Driver

You may skip this step if you have already added the external identifier for your Optimoroute driver.

Steps:

1. In Optimoroute, navigate to:

   Administration › Drivers

[A screenshot of a drivers management dashboard, showing two drivers listed with names, serial numbers, Driver External Identifier, and work hours. “Edit drivers” and other management options are highlighted in red boxes.]

1. Select the driver you wish to edit and click the **Edit** icon, or simply double-click the driver’s name.

[A form labeled “Edit driver” with fields for driver details is filled out. Red arrows and numbers highlight the Driver External Identifier field and the blue “Save” button at the bottom right.]

1. Input the **External Identifier** for the driver.
2. Click **Save**.
