Ingredients

Inventory · https://mountainstream.co/docs/ingredients/

This guide explains how to add, import, and manage raw materials within Streamline, ensuring proper stock management and accurate tracking of all ingredient details.

Adding Ingredients

There are 3 ways to add Ingredients (Raw Materials):

1. **Stock › Ingredient List › Add Ingredient**.
2. **Stock › Ingredient List › Batch Edit › Add Ingredient**.
3. Import a batch of ingredients on this template (Accessible in **Stock › Ingredient List › More › Import**).

One ingredient may have more than one variation, *e.g*. purchased from different suppliers or different pack sizes.

When adding ingredients the following information is crucial for proper stock management.

- Name.
- Group.
- Correct calculation of the price per UoM.
- Conversion to gram and default UoM.
- Supplier/Vendor.
- Order lead time.
- Shelf life (days).
- Legacy code, Accounting Code, and Tax on purchase.
- Storage Location.

The more thorough the initially entered information is, the easier operations will be going forward – *e.g.* add variations, allergens, etc.

[A computer screen displays an inventory management software showing a table of ingredients, including ingredient names, types, units, pack types, prices, and default storage locations. The interface includes menus, filters, and a search bar.]
