OptimoRoute API Key

Distribution · https://mountainstream.co/docs/optimoroute-api-key/

1. Hover onto **Distribution › Settings › OptimoRoute**.
2. In order to export data from Streamline to OptimoRoute, you must first generate and set your unique API key by logging in to the OptimoRoute Official Webpage. (If you already have your OptimoRoute API key, you can skip this step).
3. Login to your OptimoRoute app, then navigate to **Administration › Settings**.

[A screenshot of OptimoRoute’s dashboard shows a city map on the left. On the right, the Administration menu is open, highlighting “Settings” with red circles and arrows labeled 1 and 2 for accessing your OptimoRoute API Key.]

4. Expand **Account** on the left menu, then select **Web service API**.
5. Check "API enabled" to generate an API key, then copy the generated API key. If it doesn't automatically generate the API key, then click "Regenerate API key".

[A software settings page displaying navigation to Web service API, OptimoRoute API Key enabled status, a hidden API key box, a warning about regenerating the key, and arrows showing how to copy the OptimoRoute API Key.]

4. Go back to Streamline, **Distribution › Settings › OptimoRoute.**
5. Paste your API key to the "OptimoRoute API key" field, then click "Save".

[A web page displays OptimoRoute Settings with the OptimoRoute API Key highlighted. The DISTRIBUTION tab is selected in the menu, and a red arrow points to a green Save button in the top right corner.]
