Load Settings – OptimoRoute

Distribution · https://mountainstream.co/docs/optimoroute-load-settings/

Capacity Settings

1. In OptimoRoute Official Webpage, navigate to **Administration › Vehicles**.
2. Select **Capacities** on the left menu.
3. Tick the checkbox of the Capacities you want to use, then change the Capacity Label based on the Streamline packaging type you will be matching, then click **Apply changes**. We use Box and Crate in this example. Units is an optional field.

[A screenshot of the OptimoRoute settings menu showing the Capacities section and Load settings, with fields for entering capacity labels and units, and a blue Apply changes button at the bottom.]

Packaging Type

OptimoRoute Capacities are matched by Streamline Packaging Types.

[A software interface shows POD Settings under the DISTRIBUTION menu. The screen displays packaging types—Box, Crate, Sacks, Carton—with options to track, scan barcodes, and manage load settings with OptimoRoute integration.]

1. In Streamline, navigate to **Distribution › Settings › OptimoRoute**.
2. Set the appropriate Packaging label that **matches** the Capacity label you've set in OptimoRoute, then click **Save**.

[Screenshot showing two interface panels for setting load settings in OptimoRoute, with “Crates,” “Boxes,” “Sacks,” and “Carton” entered on the left and appearing as options in a dropdown menu on the right.]

- This field is optional and if you only wish to export Pack value set in Pick & Pack labels & boxes or The Manifest.
- You can match up to 4 packaging types to the OptimoRoute Capacities.

[A delivery report screen shows item details for Bennys Sandwich Deli. A red box highlights the “Pack” section—1 crate and 2 boxes—with plus and minus buttons for adjusting quantities, reflecting changes made in load settings on OptimoRoute.]
