Pull Items From Stock

Production · https://mountainstream.co/docs/pull-items-from-stock/

1. Navigate to **Production › Cut & Shape › By Distribution Date.**

[Screenshot of a production management software showing a table of bakery items, their quantity, and order details. Highlights show items produced, pull items from stock via a “pull” button, and an option to “Pull All From Stock.”.]

2. In the next window the **Lot #’s** of the available stock will be selected.

[A screenshot shows a table of orders with details like stock, order, and parent item. A yellow “Undo” button is highlighted and enlarged with a purple circle and line. Pull items from stock is reflected, with a green “Data saved” popup in the upper right corner.]

3. In the next window the **Lot #’s** of the available stock will be selected.

[A screenshot of a Pull From Stock interface highlights the Lot # column with 330-RYD, 350-NOG, 350-YAK, and 350-BKJ as you pull items from stock. The Pull button is circled at the bottom right corner.]

- If more than one **Lot** of the applicable items is available, the **Lot** with the nearest **Use by** date will be selected by default. This can be overridden by typing in the **Lot** you would like to use.
- Select **Pull.**
- Once finished the stock will deplete.
- The process can be undone by selecting **Undo**.
